ITAM · FINOPS · AI GOVERNANCE · ONE PROGRAM

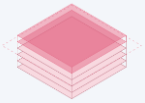
Take control, drive your program and get the results.

Tech Value Program runs ITAM or FinOps or AI Governance, or combinations of them, in an effective program that creates value for your organization.

Everyone is busy. Nobody is building the program. And leadership lacks information.

Software, cloud and AI are the fastest-growing costs in the business, yet they are run in three silos with separate tools, owners and evidence. Teams are stuck in day-to-day operations, and leadership is left with three questions nobody can answer with confidence.

THREE QUESTIONS EVERY BOARD IS ASKING

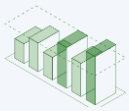


36%
of SaaS licences go unused
Zylo 2026

Are we paying for what we use?

IT Asset Management: Licences, contracts and hardware in one place, with audit risk seen early.

IAITAM 12 KPAs



29%
of cloud spend is wasted
Flexera 2026

Is cloud spend under control?

FinOps: Budgets, accountability and optimization for cloud and SaaS spend.

FinOps Framework

€35M
or 7% of global turnover
Top fine, EU AI Act

Is our AI use governed?

AI Governance: A register of every AI system, with owners, risk tiers and the evidence attached.

ISO/IEC 42001 · EU AI Act · NIST AI RMF

WHERE SOFCLO SITS

The program sits above the tools, and below the decision

WHAT LEADERSHIP GETS

Lower cost
Hard savings and cost avoidance tracked per action and rolled up to strategic goals.

Lower risk
Audit-ready evidence across vendors, cloud and AI, owned by named people.

Faster decisions
One page written from live program data, ready the moment the board asks.

Low-risk start
Crawl, Walk, Run: start with one domain, prove the value, then expand.

HOW YOU GET THERE · FOUR PHASES, 50 MODULES

01 · FOUNDATION	02 · ALIGNMENT	03 · CONVERGENCE	04 · SPECIALIZATION
Program & Plan	Operating Model	Optimization, Policy & Process	Commercial, Compliance & Risk

One unified core carries ITAM, FinOps and AI Governance, then each stream goes deep. Every domain matures from Crawl to Walk to Run, and the first savings land before the operating model is complete, because renewals do not wait.

Most tools tell you what your technology costs. SofClo tells you how it should be governed.

Standards built in: IAITAM 12 KPAs, FinOps Framework, ISO/IEC 42001, EU AI Act, NIST AI RMF
Secure by design: ISO 27001 certified, SOC 2 in progress, hosted in the EU
Simple to start: per-seat pricing, full platform and AI in every plan
Built by practitioners with 25 years in technology governance

Book a demo

30–45 minutes, no slide decks: a live walkthrough, your program mapped to the frameworks, and Q&A with a specialist.
